Frequently Asked Questions Temperature Conversion Formulas help to calculate the conversion change in the temperature value from one unit to another. According to the Fahrenheit scale, the freezing point and the boiling point of water are 32°F and 212°F respectively. For example, 41 degrees Fahrenheit would be five degrees Celsius and 95 degrees Fahrenheit would be 35 degrees Celsius. Other conversions: If you experience other differences in medicine, use the following formulas: $C = \frac{5}{9}(F - 32)$ and $F = \frac{9}{5}C + 32$.
